6:00pm Introduction + Lecture

6:45 - 7:00pm Questions + Answers

- * please submit questions upon RSVP
- * over Google Meet - link will be provided upon RSVP

Dr. Loveland is an internationally known researcher and clinician specializing in autism spectrum disorders (ASD), particularly in adults. She is best known for her research on social-emotional development and the neuropsychology of ASD. Her current research focuses on application of new technologies to the treatment of mental illness in ASD; gene-environment interactions associated with ASD; and cross-cultural influences affecting parenting stress in mothers of children with ASD.
